TRIPLE POLE
PRESSURE SWITCHES
FOR AIR COMPRESSORS

PRICE LIST EFFECTIVE FROM 01-10-2024

PRESSURE SWITCHES FOR AIR COMPRESSORS

- TYPES PS** : Type PS are triple pole Pressures switches without unloading valve.
- TYPES PSV** : Type PSV are Pressure switches Provided with an unloader valve which relieves the Pressure over the Compressors piston when the electric motor stops. Hence, when the compressor restarts, there is no gauge Pressure on the Compressors piston and as a result the electric motor life & Compressors life increase.
- HOW TO MOUNT** : The Pressure switches are designed for fitting to the air receiver by means connection (1/2"BSP), The stopping Pressure is set by turning the regulating nut (1) and starting Pressure, which depends on the differential, by turning the regulating screw (2).
- ADJUSTMENT** : Start the plant, when the stopping Pressure required is reached, turn the regulating nut (1) anti-clock wise until the plant stops.
If the plant stops before the Pressure required is reached, the nut should be turned clock wise.
Turning the regulating screw (2) anti-clock wise reduces the differential (increases the starting Pressure) While turning it clock wise increases the Pressure) while turning it clock wise increases the differential Pressure.
